

# Time and Attendance Management

**FCB *id***, a member of the FC Background, LLC family, offers turn-key systems integration capabilities leveraging AIDC applications that provide asset tracking and management solutions enabling companies to tag, track and instantly locate assets, contents and component parts across the entire supply chain enterprise.

**Project and operational profitability have never been more important than in today's economy. Time and Attendance Management applications facilitate multiple issues and provide various benefits of which include attendance validation, decrease cost associated with manual processing, eliminate paper processing and improves payroll accuracy associated with operational labor.**

## Real-Time Attendance Visibility

In today's constantly changing technology environment, corporations are determined more than ever to implement solutions that are based on internal and external forces. Lack of established systems, processes and tools adds to a company's workload and diminishes the ability to effectively manage the operation. Also, companies are faced with stricter rules and regulations mandated by federal, state and local governments. When companies manually track their attendance, they expose themselves to greater risk of not being compliant and increase their overall expenses by as much as 6%.

If you are finding it difficult to manage your labor costs these days, then read on to learn how automating your time and attendance collection process can reduce and even eliminate some of your difficulties.

- Increase flow of traffic through controlled gates
- Enforces policies
- Facilitate compliance with confidence
- Improve workforce productivity
- Eliminate "buddy clocking"
- Improve efficiencies

## Time Management

**FCB *id*'s** applications provide granular level visibility that eliminate the normal delays, errors, and omissions of manual tracking systems. Our Time and Attendance Management application automatically monitors arrival and departure events at equipped portals and entry points as individuals with tagged badges move throughout the facility.

**FCB *id*** applications can provide various benefits as listed below:

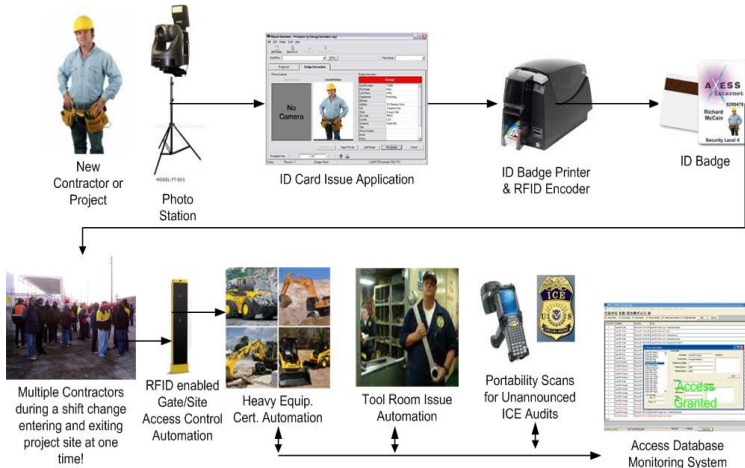

- Eliminate fraudulent clocking
- Automate existing manual paper processes
- Monitor and facilitate mass evacuation events
- Increase accuracy on labor costs

## Data Management

**FCB id** understands the site access data flow requirements for a normal job site and or secure facility and as such has designed its Time and Attendance application to provide that level of detail visibility facilitating granular level event reporting. In addition to our application performance, our systems leverage off the shelf components to ensure post service capability and solution stability.

**Our systems automate credentialing, secure tracking and provide real-time visibility via zonal and or campus wide facilities.**

## Making Applications a Reality

**FCB id** helps companies determine how best to apply certain technologies throughout the enterprise. We achieve this by providing project scoping, business process consulting, system design documentation, and hardware/software integration support.

### **FCB id** Services:

- High-Level Business Process Consulting
- Procurement of appropriate combination of hardware, software & services from tested and certified manufacturing partners
- On-site solution analysis & testing within your facility
- Complete solution design & AIDC tag placement services
- Turn-key integration and site commissioning services
- Post deployment and SLA maintenance support.

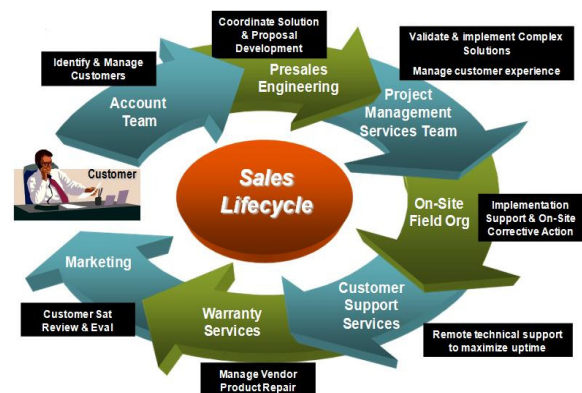

## Accelerate ROI with Proven Solutions

Together, **FCB id** and its strategic middleware vendors provide solutions with unique value:

- Proven business uses cases enabling businesses to deploy solutions in less time, with less cost and with less risk
- Comprehensive support for the entire RFID process from tagging to data capture to analysis
- High level design environment that allows users to create, adapt, and maintain processes to meet their business' specific needs
- Flexible architecture enabling organizations to run applications directly on readers and controllers reducing the cost or the required IT infrastructure and the total cost of ownership.

## Proven People, Proven Experience

Our team is an experienced group of data collection professionals that understand the science of applying RFID technology to business processes. We start each project by understanding of your specific environment and requirements. After achieving the baseline, next step is to collaborate with your team to develop a set of mutually agreed upon objectives and milestones specific to the project. Working with the on-site team to ensure a functional partnership that imparts knowledge and complete usability of application.
